

On the Subject of The Button

You might think that a button telling you to press it is pretty straightforward. That's the kind of thinking that gets people exploded.

See Appendix A for indicator identification reference.

See Appendix B for battery identification reference.

Follow these rules in the order they are listed. Perform the first action that applies:

1. **Blue** 'ABORT' : hold
2. 'DETONATE' AND (#batteries \geq 2) : press and release
3. **White** AND indicator 'CAR' : hold
4. (#batteries \geq 3) AND indicator 'FRK' : press and release
5. **Red** 'HOLD' : press and release
6. else : hold

Releasing a Held Button

If you start holding the button down, a colored strip will light up on the right side of the module. Based on its color you must release the button when the timer shows the given number in any position:

- **Yellow strip:** Release on 5.
- **Blue strip:** Release on 4.
- **Else:** Release on 1.
